

Using LiDAR to link forest canopy conditions with diversity patterns of Lepidoptera at Mammoth Cave National Park

Dodd, L.E.^{1,2}, N.S. Skowronski³, M.B. Dickinson³,
M.J. Lacki², & L.K. Rieske-Kinney¹

University of Kentucky Departments of Entomology¹ & Forestry²
U.S. Forest Service, Northern Research Station³

Remote Sensing & Biodiversity

- Large-scale patterns
 - Feasibility¹
 - Necessity²

¹Skowronski et al. 2007. Remote Sens. Environ. 108: 123-129.

²Lesak et al. 2011. Remote Sens. Environ. 115: 2823-2835

Function & Role in Eastern Forests

Lepidopteran Diversity

Function & Role in Eastern Forests

- Variable occurrence across habitats¹
 - Indicator species, responsive to forest management

¹Summerville & Crist. 2008. Can. Entomol. 140: 475-494.

Lepidopteran Diversity

Function & Role in Eastern Forests

- Variable occurrence across habitats¹
 - Indicator species, responsive to forest management
- Conspicuous members of the community
 - Major herbivores¹

¹Summerville & Crist. 2008. Can. Entomol. 140: 475-494.

Lepidopteran Diversity

Function & Role in Eastern Forests

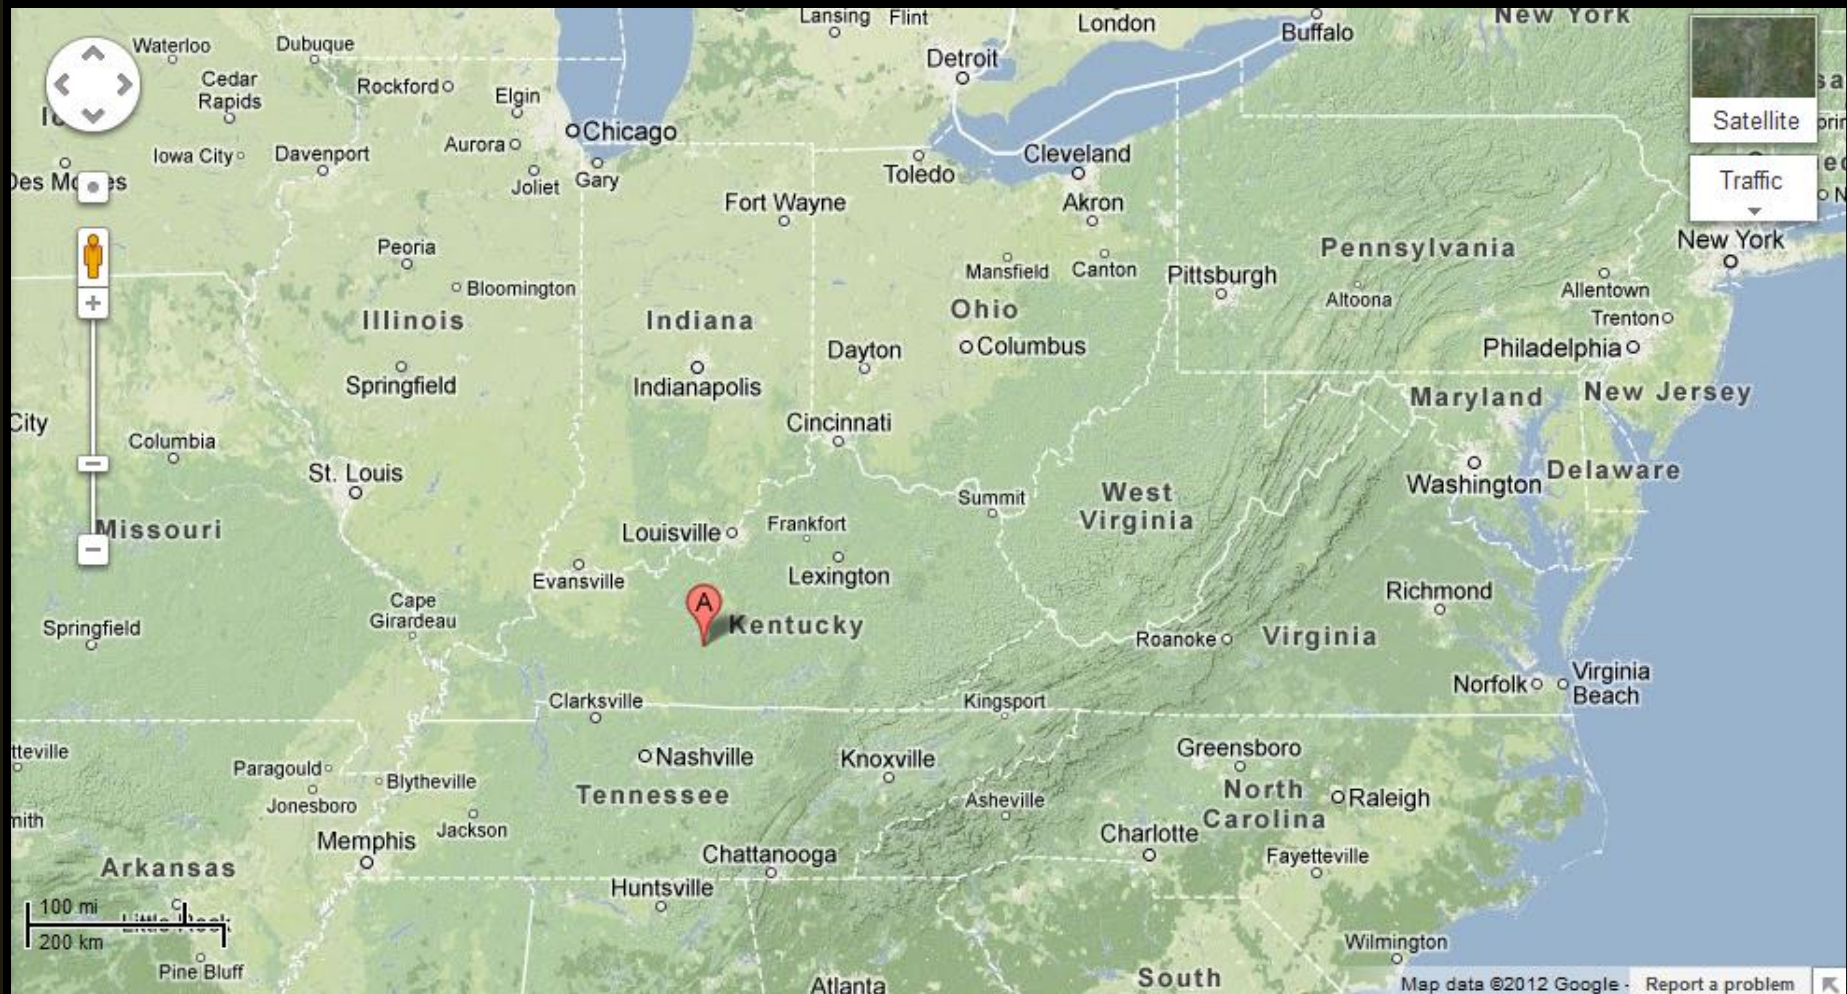

- Variable occurrence across habitats¹
 - Indicator species, responsive to forest management
- Conspicuous members of the community
 - Major herbivores¹, a major prey source²

¹Summerville & Crist. 2008. Can. Entomol. 140: 475-494, ²Lacki & Dodd. 2011. in USFS Gen. Tech. Report S-145.

Survey Transect,
2010-2011

Burn Areas

Core
Hibernacula

Methods

Mammoth Cave National Park

All survey points marked via GPS,
then geo-referenced in ArcGIS

Methods

Mammoth Cave National Park

A = Anabat acoustic detector for bats

All survey points marked via GPS,
then geo-referenced in ArcGIS

Methods

Mammoth Cave National Park

M = Malaise trap for nocturnal insects

All survey points marked via GPS,
then geo-referenced in ArcGIS

Methods

Mammoth Cave National Park

L = Light trap for nocturnal insects

All survey points marked via GPS,
then geo-referenced in ArcGIS

Methods

Moth Occurrence

- Surveys throughout 2010 – 2011
 - 22 nights (202 trap/nights)
 - Emphasis on April-May, Aug-Oct

Methods

Moth Occurrence

Methods

Moth Occurrence

- 
- Abundance & species richness within families
 - Species richness estimation¹
 - Chao 2, ICE, & Mau Tau
 - EstimateS v.8.2; default settings; 1,000 iterations
 - Top families for analysis with LiDAR

¹Summerville & Crist. 2005. Biodivers. Conserv. 14: 3393-3406

Methods

LiDAR Survey

- LiDAR = “Light Detection and Ranging”

Methods

LiDAR Survey

- LiDAR = “Light Detection and Ranging”
- Discrete-return scanning LiDAR ¹
 - 900-1,600 nm wavelength
 - > 4 pulses / m²

¹Skowronski et al. 2007. Remote Sens. Environ. 108: 123-129.

Methods

LiDAR Survey

- LiDAR = “Light Detection and Ranging”
- Data collected Oct 2010 (leaf-off) via fixed-wing aircraft

Methods

- What scale is meaningful?

LiDAR Variables

Methods

LiDAR Variables

- What scale is meaningful?
- Laser returns across 10 m strata

Methods

LiDAR Variables

- What scale is meaningful?
- Laser returns across 10 m strata
- 15 m radii around trap locations¹

¹Lesak et al. 2011. Remote Sens. Environ. 115: 2823-2835

Methods

LiDAR Variables

- 0-10 m CHP
- 10-20 m CHP
- 20-30 m CHP
- 30-42 m CHP
- Understory Ratio
 - $0-10 \text{ m CHP} / \text{Total CHP}$
 - Indicator of canopy “shape”

Methods

LiDAR Variables

- 0-10 m CHP
- 10-20 m CHP
- 20-30 m CHP
- 30-42 m CHP
- Understory Ratio
 - $0-10 \text{ m CHP} / \text{Total CHP}$
 - Indicator of canopy “shape”
- Gap Index
 - Percentage of pixels with no laser returns $>3 \text{ m}$ height

Analysis

Moth + LiDAR

- Today's talk... Canonical Correspondence Analysis
 - Standard ordination techniques following ter Braak¹
 - PC-ORD v. 4.25; default settings; 300 iterations
- Future... Predictive models & landscape maps

¹McCune & Grace. 2002. Analysis of Ecological Communities. MJM Software Design

Results

Moth Occurrence

- 24,198 moths
- 535 species
- 28 families

Results

Moth Occurrence

- 24,198 moths
- 535 species
- 28 families
- How much of this assemblage are we accounting for?

Results

Moth Occurrence

- 24,198 moths
- 535 species
- 28 families
- How much of this assemblage are we accounting for?

Results

Moth Occurrence

- 24,198 moths
- 535 species
- 28 families
- How much of this assemblage are we accounting for?
 - 86% (vs. ICE)
 - 87% (vs. Chao 2)

Results

Moth Occurrence

- Most abundant & richest families
 - Erebididae
 - Noctuidae
 - Pyralidae
 - Geometridae
 - Notodontidae

Discussion & Implications

- Findings to date...
 - Abundance associated with overstory
 - Diversity associated with understory

Discussion & Implications

- Findings to date...
 - Abundance associated with overstory
 - Diversity associated with understory
- Lep diversity driven by floral diversity in the understory
 - Riparian habitats^{1,2}
 - Logged upland sites³

³Dodd et al. 2012. Forest Ecol. Manage. 267: 262-270.

Discussion & Implications

- Findings to date...
 - Abundance associated with overstory
 - Diversity associated with understory
- How does occurrence of prey mesh with the predators?
 - Habitat structure vs. prey availability^{1,2,3}

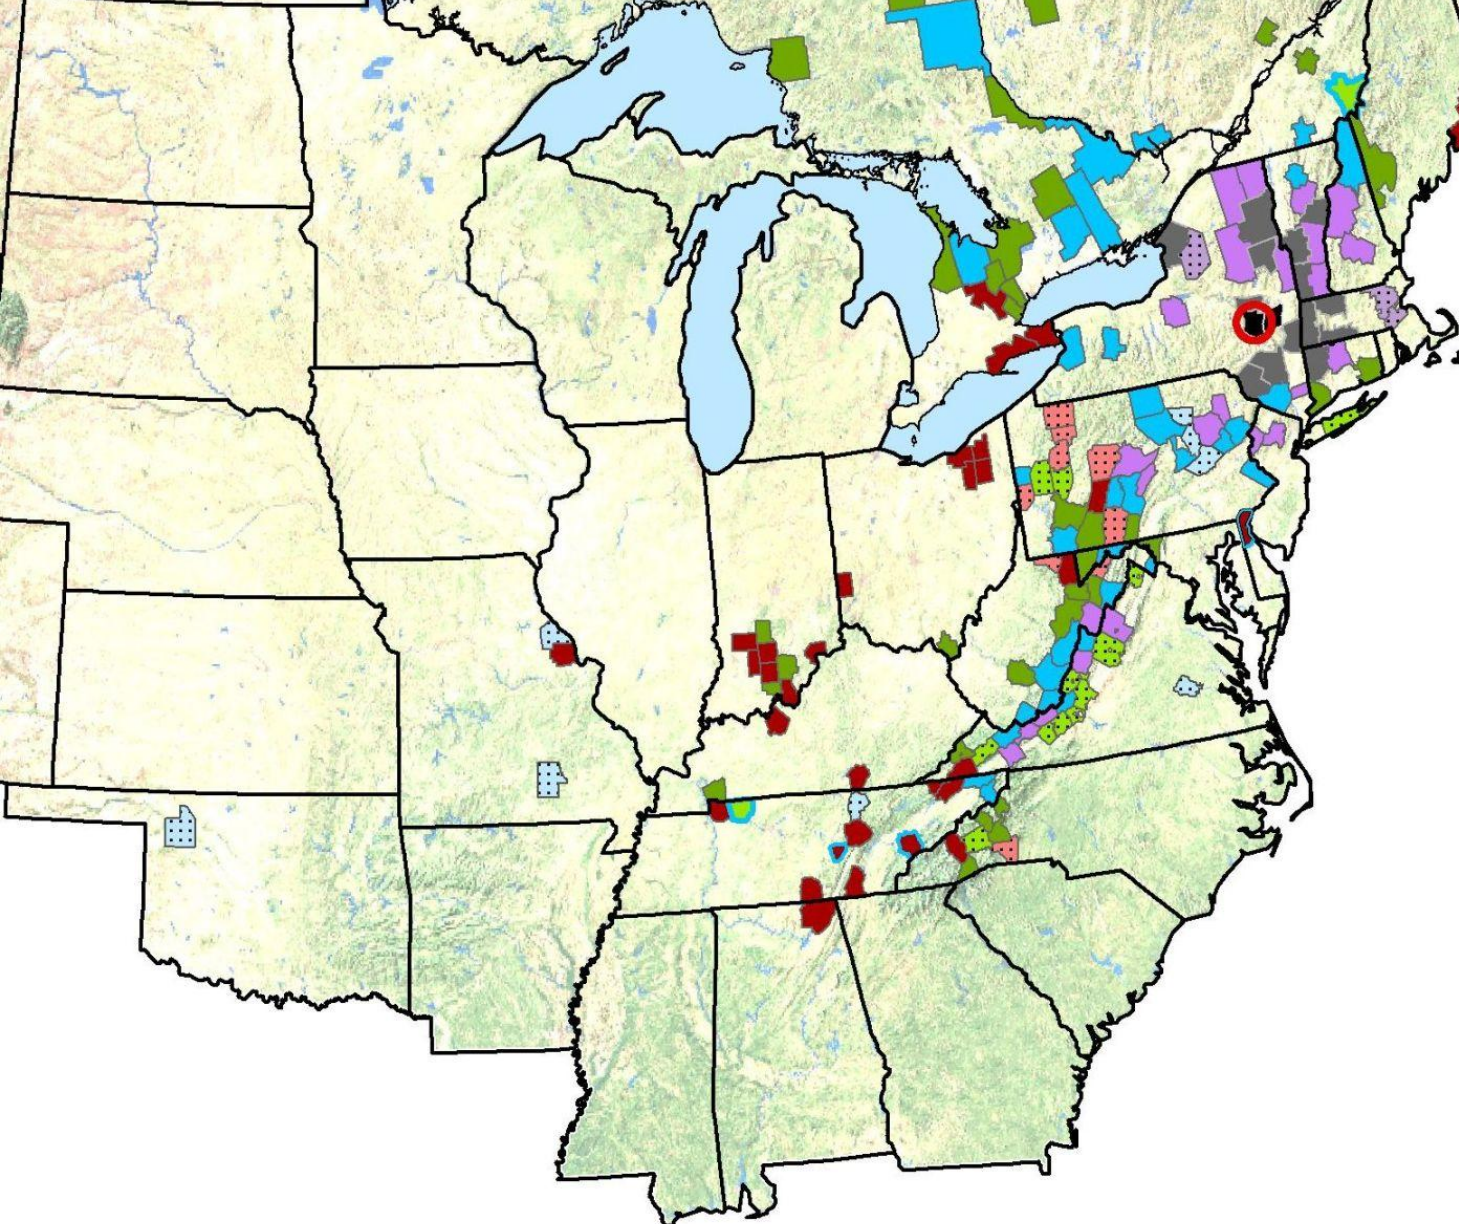

¹Morris et al. 2010. J. Wildlife Manage. 74: 26-34.

²Dodd et al. 2012. Forest Ecol. Manage. 267: 262-270.

³Muller et al. 2012. Oecologia 169: 673-684.

Discussion & Implications

- Findings to date...
 - Abundance associated with overstory
 - Diversity associated with understory
- How does occurrence of prey mesh with the predators?
 - Habitat structure vs. prey availability^{1,2,3}
 - What happens if/when White-nose syndrome hits?
